SUMMARY

Software Developer with experience in developing full-stack web applications, backend services, and RESTful APIs using Java, Spring Boot, React.js, Angular, and Python. Skilled in database management, microservices architecture, API security, and software testing, with knowledge of cloud platforms, CI/CD pipelines, and AI integration using LLMs, LangChain, and RAG. Experienced in building application features, integrating services, and maintaining reliable software solutions using Agile methodologies.

SKILLS

Programming Languages — Java, Python, JavaScript (ES6+), TypeScript, SQL

Backend Development & Architecture — Spring Boot, Spring MVC, Spring Security, Node.js, Express.js, FastAPI, Flask, Hibernate, JPA, Microservices Architecture

Frontend Development — React.js, Angular, Redux, HTML5, CSS3, Bootstrap, Tailwind CSS, Responsive Web Design

API Development & Security — RESTful APIs, JSON, Swagger/OpenAPI, OAuth 2.0, JWT Authentication, Third-Party API Integration

AI & Python Engineering — Python Scripting, Pandas, NumPy, OpenAI API, Large Language Model (LLM) Integration, Prompt Engineering, LangChain, Retrieval-Augmented Generation (RAG)

Databases & Caching — PostgreSQL, MySQL, Microsoft SQL Server, MongoDB, Redis, Database Design, SQL Query Optimization

Testing & Code Quality — JUnit, Mockito, Pytest, Jest, Unit Testing, Integration Testing, Debugging, SonarQube

Cloud & DevOps — AWS, Microsoft Azure, Docker, CI/CD Pipelines, GitHub Actions, Jenkins, Application Deployment

Development Tools & Methodologies — Git, GitHub, Maven, Gradle, Postman, IntelliJ IDEA, Visual Studio Code, Jira, Agile, Scrum

EXPERIENCE

Software Developer, *OPENLANE* 06/2025 – Present

- Develop and maintain backend application components using Java, Spring Boot, and RESTful APIs to support business requirements and application functionality.
- Design and integrate API endpoints with frontend applications developed using React.js or Angular, supporting data exchange and responsive user workflows.
- Implement database access and persistence using JPA, Hibernate, and SQL, with attention to query performance and data consistency.
- Develop and modify application modules, implement business logic, and update existing code to support new features and functional requirements.
- Integrate external services through REST APIs and implement authentication mechanisms using Spring Security, OAuth 2.0, and JWT where required.
- Support application testing, debugging, code quality checks, and deployment workflows using Git, Docker, CI/CD pipelines, and cloud services as applicable.

Junior Software Developer, *Tatvasoft* 08/2022 – 06/2023

- Developed and maintained Java-based application components using Spring Boot, Spring MVC, and object-relational mapping technologies.
- Implemented RESTful API endpoints for application operations and integrated backend services with frontend components.
- Created and maintained database queries and persistence logic using MySQL, Spring Data JPA, and Hibernate.
- Built and updated web interface components using JavaScript, HTML5, CSS3, and Angular based on application requirements.
- Validated API functionality using Postman, investigated application defects, and performed debugging and regression checks to verify fixes.
- Used Git and Azure DevOps to track code changes, manage development tasks, and support software delivery within an Agile Scrum environment.

PROJECTS

CareerTrack – Career Management Web Application, *Personal Project*

- Developed a Spring Boot REST API backend using Controller, Service, Repository, and DTO layers to manage companies and job postings through CRUD operations.
- Built an Angular frontend with reusable components, services, and HttpClient to retrieve and display company and job data.
- Implemented DTO-based request and response handling, Bean Validation, and centralized exception handling to improve API consistency and input validation.

Employee Management System, *Academic Project*

- Created a layered Spring Boot application with RESTful CRUD APIs to manage employee records and handle JSON request and response data.
- Integrated Spring Data JPA and Hibernate with MySQL for database persistence and developed frontend pages using HTML, CSS, and jQuery.
- Configured Spring Security with role-based authentication and authorization to protect application endpoints.

EDUCATION

Postgraduate Diploma – Computer Software and Database Development, *Loyalist College* 04/2024 – 12/2025 | Ontario, Canada

Bachelor of Information Technology, *Gujarat University* 07/2018 – 06/2022 | Ahmedabad, India
